

To Bee or Not to Bee...

Some insects are pests only in certain situations. Can you name how each of the following is a pest and when it's not considered a pest? (Good guys/bad guys, line between criminals and cops)

What Am I?	I'm a Pest When....	I'm Not a Pest When...
Multicolored Asian Lady Beetle	I come into the house in the fall. I bite people.	I eat aphids and other insect pests.
Termite	I destroy the wood in homes	I eat a rotting log in the forest
House Fly	I fly around and annoy people in the house	I lay my eggs on decaying matter (feces, dead animals, etc.) and help organic recycling
Bumble Bee	I build nests around homes I sting people	I pollinate flowers
