

## **Beneficial Insects Kit Activities Introduction**

This kit contains information and a number of activities about pollinators, predatory insects, and spiders. Activities include lesson plans and materials developed by Nebraska Game and Parks, University of Nebraska—Lincoln Department of Entomology, and the University of Kentucky Department of Entomology. You can make copies of materials as needed for your educational program or classroom.

The kit also includes toys/models of insects and spiders and laminated photos or fact sheets that you can use to demonstrate and discuss predatory organisms, pests, or pollinators. You may wish to use these to supplement activities.
